APPLICATION AND USE

A. Dosing Procedure

MARICHEM P.C.S. may be used concentrated or diluted with water, depending on the degree of contamination, the surface area to be treated, the desired degree of cleaning and the available downtime.

Actually, the user is the best one capable to regulate the quantity and concentration to be used for the situation at hand.

In any case, when the accumulation is not heavy, a 50% solution with water must be used. Otherwise, **MARICHEM P.C.S.** can be used undiluted especially when deposition is heavy and hard spots persist.

B. Cleaning Procedure

Conventional cleaning methods such as a brush, hard sponge, thick and hard broom and/or a mop can be used on heavy duty and hard stain deposits.

Note that for heavy accumulations the cleaning procedure might be necessary to be repeated until the results are satisfactory. Furthermore, is important to keep in mind that 1 litre of **MARICHEM P.C.S.** solution is sufficient to cover a surface area of 8–10 square meters.
